

FORGE LOGBOOK

One page per build. Print the record page as many times as you need — 26 copies makes a year book at a knife every two weeks.
Three-hole punch, binder, done.

WHY KEEP A LOG

Repeatability	The knife that came out perfect? The log is the only way you make it twice.
Honest pricing	Real hours per stage kill wishful pricing. Feed them into the Pricing Calculator.
Warranty backup	A returned blade with a logged heat treat is a diagnosis, not a mystery.
Progress you can see	Flip back 20 builds. That's the cheapest motivation in the shop.

HOW TO FILL IT FAST

During the build	Pencil the steel, stock size and heat-treat numbers the moment they happen. Memory lies by dinnertime.
Hours	Round to the quarter hour. Include grinding tape changes and glue-up wait? No — bench time only.
"Next time" box	The most valuable field on the page. One honest sentence beats ten measurements.

Tip: staple the steel supplier's batch label (or write the batch number) to the page. When a batch behaves oddly, you'll know which blades share it.

CUSTOMER / DESTINATION
